

Conceptual Data Modelling Architecture

A comprehensive reference view outlining the multi-tiered lifecycle and pipeline stages of data orchestration, advancing systematically from initial data ingestion up through consumption-ready layers tailored for business operations.

Staging Layer	ODS Layer	EDW Layer	Data Marts	Consumption Layer
• Landing zone for raw data • Stores data exactly as received • Enables auditing & reprocessing • Minimal transformation • No History data	• Cleaned & standardized data • Removes duplicates & fixes formats • Standardizes units & codes • Integrates multiple sources • Short-term retention: e.g., 3 months	• Central historical repository • Stores Dimensions scd1 or scd2 & Facts • Applies business rules & derived metrics • Single source of truth • Long-term retention: e.g., 3-5+ years	• Subject-specific datasets • Aggregations & KPIs for departments • Improves performance • Department-focused views • Long-term retention: e.g., 3-5+ years	• Presentation-ready data • Pre-aggregated & formatted • Supports dashboards & BI tools • Applies security filters • Users: Finance, Sales, Customer, Risk, HR, Operations & Outbound Teams
